EXPERIENCE

Co-founder & CTO

Utilize

09/2019 - 04/2026

Built a no-code platform for creating applications on top of Google Sheets and Notion; the Notion product was acquired in April 2026.

- Built the app builder from scratch across the frontend and backend using React, Node.js and MongoDB.
- Designed and shipped core app-builder capabilities, translating flexible user configuration into functional applications.
- Owned features end-to-end, from product and technical design through implementation, deployment and iteration.
- Worked across UX design, customer success and business strategy, including pricing, fundraising and the eventual acquisition.

Co-founder & CEO

StretchCloud

01/2019 - 06/2019

StretchCloud was built around the idea that edge computing will become mainstream and will increasingly serve more compute use cases.

- As the CEO, I worked on figuring out the ICP, potential customer outreach, and refining the problem space.
- We secured 5 LOIs and raised pre-seed funding from Entrepreneur First.
- I decided to shut down the business owing to co-founder differences.

Senior Software Engineer

PhonePe

12/2016 - 12/2018

- Worked on the first version of the PhonePe iOS payments app.
- Worked on a Javascript-based in-app store to launch the first few micro-apps inside PhonePe.
- Tech used: Swift, ObjC, JavaScript, WebKit.

Senior iOS Engineer

Hike Messenger

06/2014 - 11/2016

- Worked on building some core capabilities in the Hike Messenger's iOS app, including messaging, authentication, and media handling.
- Tech used: Swift, ObjC.

EDUCATION

Bachelor of Technology (IT)

Netaji Subhas Institute of Technology

2010 - 2014

SUMMARY

Senior full-stack/product engineer and former founder with 12+ years of experience building and shipping software products. Most recently co-founded Utilize, a no-code application builder built with React, Node.js and MongoDB, working hands-on across the frontend and backend from initial product development through the acquisition of its Notion product. Comfortable owning products end-to-end in high-agency, ambiguous startup environments.

SKILLS

Technical Skills

MongoDB Postgres Node.js SQL React React Native AWS Docker

Programming Languages

TypeScript/JavaScript Python Swift ObjC C

PROJECTS

Legal AI

2026

Consulted with a legal AI startup to improve their document editing features

- Tech used: Python, OpenAI.

MAICO

2023

A simple chatbot based on a RAG system to find the most suitable marketer for your business

- Tech used: OpenAI embeddings, Postgres Vector, Python, Typescript, Node.js.

AR Mystery

2019

A multiplayer AR game on iOS that emulates a mystery room in the comfort of one's own house

- Tech used: Swift, ARKit.

PUBLICATIONS

History-Based Secure Routing Protocol to Detect Blackhole and Greyhole Attacks in Opportunistic Networks

Bentham Science

01/2017

PROJECTS

StickyMe

2018

iOS app to segregate singular sticky notes from a picture containing multiple notes

- Tech used: ObjC, Swift, OpenCV.

Fashion-based chatbot

2016

Built a chatbot that recommends clothing from Myntra based on user preferences

- Tech used: ObjC, JavaScript, Python, State machines.
